

Working Prototype - Power Rangers - Slug Notes

Known Issues:

- When you create a new flashcard (in any of your decks) single long words over 25 characters i.e.
“mm” would cause the flashcard size to be abnormal resulting in improper functionality.
 - To fix this issue we will have to check that every word on a flashcard will be less than 25 characters. We did not implement this during the sprint because there were other tasks that needed to be done and there are rarely words of this length.
- Development of our website was done using Google Chrome. The technology used for animations and smooth appearance of the site is supposedly functional across common browsers but we did not have time to thoroughly test this.
- When you are on a user profile page, you can copy one of your deck_id signatures and paste it into the u_id of the URL on the user profile page to access another user's page.
 - To fix this we would have to come up with another way to create a signature that is more unique than the current implementation. We only discovered this towards the end and there was not enough time to fix the issue.
